OceanWorks International’s Node Gravity Base Design Incorporated for FORCE FAST System

OceanWorks International’s design for the Platform Gravity Base, which has seen some modifications by FORCE, maximizes stability on the seafloor in a high current environment such as those found in the Minas Passage through its 3-point triangular design. The platform also incorporates the OceanWorks’ designed Float Release Mechanism (FRM) which will bring a plasma rope to the surface enabling a waiting surface vessel to conveniently recover the FAST platform.

OceanWorks International is an internationally recognized subsea technology company specializing in the design and manufacture of manned / unmanned subsea systems and specialized equipment for the scientific and environmental, oil and gas, military, and other marine markets. Offering a full range of subsea system engineering, design and analysis, fabrication, testing, and project management services, OceanWorks has been at the cutting edge of deep submergence and diving technology, operations, and support for over 20 years and we look forward to providing subsea engineering solutions to our customers for years to come.
